

When Was Your Last Network Check-UP?

Systel's NEW network assessment tool is now available! Free through September 24, 2020. (\$1500 Value)

Network Check-UP is used to identify underlying issues and security risks on your business's network, while allowing us to make educated recommendations through our Solutions Department and All Covered partnership.

Security Aware, Because We Care

Network Check-UP is an industry-leading IT assessment tool used to collect and compare multiple data points to uncover hard to detect issues and measure your Network's risk. Systel will then provide recommended fixes and track the remediation progress from start to finish.

IT Assessments Made Fast & Easy

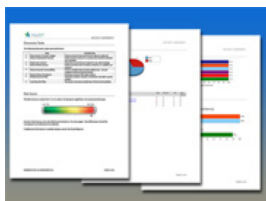

The process is simple: Systel Network Check-UP is a non-invasive data collector that can remotely run on the network, analyze the data, and compile it into a set of easy-to-read IT security reports, in most cases in well under an hour. Unlike any other IT assessment product, there are no agents, probes or software to install.

If You Can't Measure It, You Can't Improve It

Network Check-UP's Security Risk Score not only uncovers threats to the network but assigns them a Risk Score based on network impact. The Risk Score allows you to prioritize the remediation of individual issues and measure network health over time.

Find Out Your Security Risk in Under an Hour!

Security Risk Report

A Customized Risk Score and chart show the relative health of the network security, along with a summary of the number of computers with issues. This powerful tool also reports outbound protocols, system control protocols, user access controls, external vulnerabilities summary, and dark web password and credential breaches.
